

Instalación de R Studio

Dentro del curso se desarrollarán ejercicios prácticos con el objetivo de ilustrar la teoría aprendida. Para este fin se utilizará el software R Studio, el cual es completamente gratuito. La instalación consta de dos fases (1) Instalación de R; (2) Instalación de R Studio.

Instalación de R

Descarga:

El software puede ser descargado directamente desde el siguiente enlace

Windows: <https://cran.r-project.org/bin/windows/base/>

R-4.6.1 for Windows

[Download R-4.6.1 for Windows](#) (88 megabytes, 64 bit) 
[README on the Windows binary distribution](#)
[New features in this version](#)

This build requires UCRT, which is part of Windows since Windows 10 and Windows Server 2016. On older systems, UCRT has to be installed manually from [here](#).

If you want to double-check that the package you have downloaded matches the package distributed by CRAN, you can compare the [md5sum](#) of the .exe to the [fingerprint](#) on the master server.

Frequently asked questions

- [Does R run under my version of Windows?](#)
- [How do I update packages in my previous version of R?](#)

Please see the [R FAQ](#) for general information about R and the [R Windows FAQ](#) for Windows-specific information.

Other builds

- Patches to this release are incorporated in the [r-patched snapshot build](#).
- A build of the development version (which will eventually become the next major release of R) is available in the [r-devel snapshot build](#).
- [Previous releases](#)

Note to webmasters: A stable link which will redirect to the current Windows binary release is [<CRAN MIRROR>/bin/windows/base/release.html](#).

Last change: 2026-06-26

Mac: <https://cran.r-project.org/bin/macosx/>

* Para computadores Mac recientes utilizar la opción “Apple silicon”. En computadores antiguos (previos a 2020) utilizar la opción “older Intel Macs”.

R for macOS

This directory contains binaries for the base distribution and of R and packages to run on macOS. R and package binaries for R versions older than 4.0.0 are only available from the [CRAN archive](#) so users of such versions should adjust the CRAN mirror setting (<https://cran-archival.r-project.org>) accordingly.

Note: Although we take precautions when assembling binaries, please use the normal precautions with downloaded executables.

R 4.6.1 "Happy Hop" released on 2026/06/24

Please check the integrity of the downloaded package by checking the signature:
`pkgutil --check-signature R-4.6.1-arm64.pkg`
in the *Terminal* application. If Apple tools are not available you can check the SHA1 checksum of the downloaded image:
`openssl sha1 R-4.6.1-arm64.pkg`

Latest release:

For Apple silicon (M12...) Macs:
[R-4.6.1-arm64.pkg](#)
SHA1 hash: 1c9f4a4b1559ba0379a0d556321a97181635
(ca. 101MB, notarized and signed)

R 4.6.1 binary for macOS 14 (Sonoma) and higher for arm64 Macs, signed and notarized packages.

...l framework, Rapp GUI 1.83, Tcl/Tk 8.6.12 X11 libraries and Texinfo 7.3. The latter two components are optional and can be omitted when choosing "custom install", they are only needed if you want to use the `tcltk` R package or build package documentation from sources.

If installing from the *Downloads* folder you must allow the Apple Installer access to that directory. Denying the access will result in you not being able to install any software from there and then you must move the file to a location that is not private such as your home folder.

Note: the use of X11 (including `tcltk`) requires [XQuartz](#) (version 2.8.5 or later). Always re-install XQuartz when upgrading your macOS to a new major version.

This release uses Xcode 26.0 (the same LLVM toolchain up to 26.3) and GNU Fortran 14.2. If you wish to compile R packages which contain Fortran code, you may need to download the corresponding GNU Fortran compiler from <https://mac.R-project.org/tools>. Any external libraries and tools are expected to live in `/opt/R/arm64`.

For older Intel Macs:
[R-4.6.1-x86_64.pkg](#)
SHA1 hash: 778d425a05899656a7021c0a84b1ac292375
(ca. 104MB, notarized and signed)

R 4.6.1 binary for macOS 11 (Big Sur) and higher, signed and notarized packages.

...l framework, Rapp GUI 1.83, Tcl/Tk 8.6.12 X11 libraries and Texinfo 7.3. The latter two components are optional and can be omitted when choosing "custom install", they are only needed if you want to use the `tcltk` R package or build package documentation from sources.

This release uses Xcode 14.2 and GNU Fortran 14.2. If you wish to compile R packages which contain Fortran code, you may need to download the corresponding GNU Fortran compiler from <https://mac.R-project.org/tools>. Any external libraries and tools are expected to live in `/opt/R/x86_64`.

[NEWS](#) (for Mac GUI)

[Mac-GUI-1.82.tar.gz](#)
SHA1 hash: 778d425a05899656a7021c0a84b1ac292375

Sources for the Rapp GUI 1.82 for macOS. This file is only needed if you want to join the development of the GUI (see also [Mac-GUI repository](#)), it is not intended for regular users. Read the INSTALL file for further instructions.

Instalación:

Tanto en Windows como en Mac aparecerá una ventana de instalación. Simplemente seguir las instrucciones, presionando siguiente en cada opción.

Instalación de R Studio

Descarga:

El enlace de descarga para todos los sistemas operativos es el mismo

<https://tinyurl.com/2ma659mt>

Instalación:

En Windows aparecerá una ventana de instalación. Se debe seguir con el instalador presionando “siguiente”.

En Mac, hacer doble clic en el archivo de descarga. En la nueva ventana se debe arrastrar el ícono de RStudio a la carpeta Applications (o aplicaciones)
